

## Customer Need

The service provider was asking for DDoS prevention solution for the best protection against today's wide range of DDoS attacks.

## Offered Solution

With our Arbor Threat Level Analysis System (ATLAS), we're continuously up to date on service provider's very latest threats. We track the bad actors before they strike. We know what today's volumetric, TCP state-exhaustion and application layer attacks look like, even those launched simultaneously. And we know where the customer is most likely to be vulnerable.

Best of all, we have the expertise and visibility to mitigate DDoS attacks before they inflict harm.

## Business Benefit

DDoS attack prevention for the service provider could wreak financial havoc, compromise customers and damage operator reputation.
